

We're pulling out
all the stops for
importers and
exporters

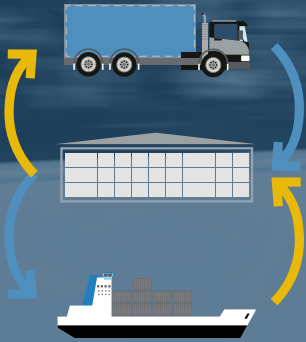

QUAYCONNECT

BROUGHT TO

PORT  NELSON

 CEL

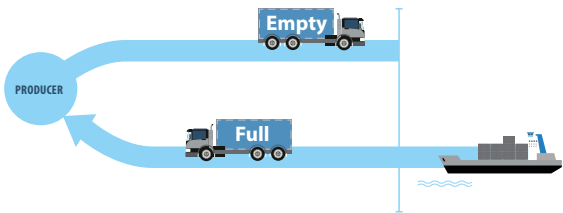

QuayConnect is an integrated transport and storage model that removes unnecessary stops in the import/export process by transforming our fundamental distribution logistics mix.

QUAYCONNECT

Existing model.

With current distribution methods, there are simply too many under-utilised ship movements, empty truck transfers, unnecessary storage stops and underfilled trucks making their way around New Zealand.

Importer.

Major supply chain inefficiencies

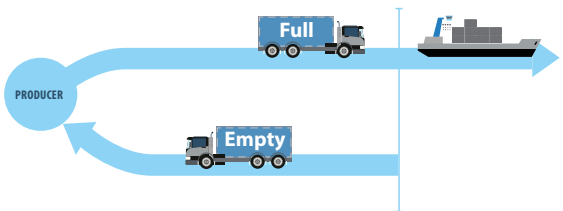

Higher per unit costs

Fewer partner synergies

No sustainability focus

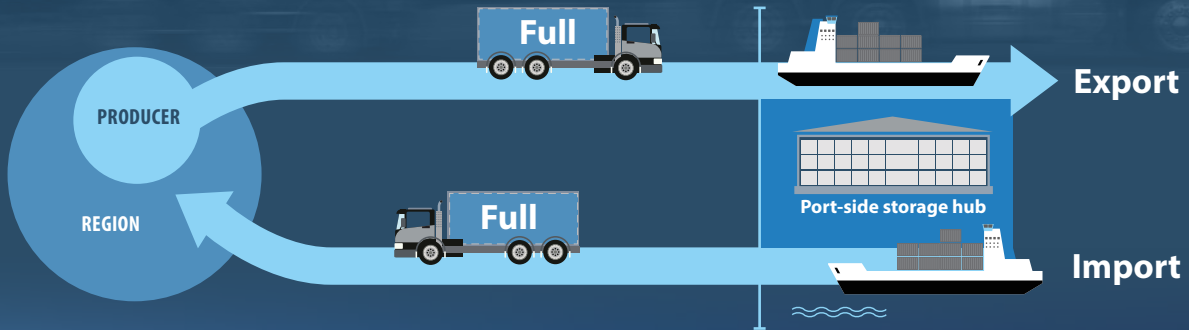

Unnecessary cargo movement/cost

Exporter.

QuayConnect model.

QuayConnect is a better way of distributing goods, by focusing movement around a central, port-side storage hub, resulting in optimal import and export loads through all phases of the supply chain.

Cost and load efficiencies

Reduced per unit costs

Win/win partnerships

Improved sustainable practices

Reduced carbon footprints

QUAYCONNECT

PORT NELSON

CEL

QuayConnect represents a sea change in import and export flow – it's the future of distribution logistics.
